EDUCATION

Northeastern University, **Khoury College of Computer Sciences** — Sept 2025 – Present
Master of Science in Computer Science — Expected graduation: December 2027
Related courses: Computer Systems, Algorithms, Web Development — GPA: 4.0/4.0

Fr. Conceicao Rodrigues College of Engineering, Mumbai, India — July 2021 – June 2025
Bachelor of Engineering in Computer Engineering — GPA: 9.50/10.0
Related courses: Data Structures and Algorithms, Software Engineering, Machine Learning

TECHNICAL KNOWLEDGE

Languages: C, Python, Java, JavaScript
Databases: PostgreSQL, MongoDB, MySQL
Web technologies: HTML, Tailwind CSS, Typescript, ReactJS, NodeJS, REST APIs, Spring Boot, WebSocket
Cloud & DevOps: Git, Docker, RabbitMQ, CI/CD pipelines, Vercel, Render

WORK EXPERIENCE

Software Engineering Intern — Jan 2025 – July 2025
Marine Electricals Ltd, Mumbai, India

- Developed and deployed 15+ control logic sequences in Structured Text on Schneider EcoStruxure platform, reducing system configuration time by 20%
- Engineered IoT monitoring solution for Ring Main Unit (RMU) networks, maintaining 99.9% uptime across data center infrastructure serving 500+ critical loads
- Analyzed and optimized IoT system architectures across 3+ industrial electrical applications, identifying bottlenecks in automated control pipelines

PROJECTS

Motiv8 Fitness Application — July 2025 – Dec 2025

- Developed microservices-based fitness tracking platform using Spring Boot, event-driven architecture (RabbitMQ), service discovery (Eureka), and polyglot persistence (PostgreSQL, MongoDB)
- Designed and implemented RESTful inter-service communication using WebClient with load balancing and asynchronous messaging patterns for scalable data processing
- Built distributed system with centralized configuration management (Spring Cloud Config), API Gateway routing, and structured logging for observability across microservices
- Containerized application using Docker, enabling modular deployment and horizontal scalability in production environments

NexusNU, Social Networking Website — Sept 2025 – Present

- Developed and deployed full-stack MERN application with TypeScript, scaling to 100+ active users with JWT-based authentication and role-based access control (RBAC)
- Built RESTful API using Node.js, Express, and Mongoose, managing complex relational data across User, Post, and Event models with input validation and error handling
- Integrated third-party APIs (JSearchAPI, ESCO) to deliver real-time job listings and skills management with autocomplete search functionality
- Deployed CI/CD-enabled production application on Netlify and Render with MongoDB Atlas, optimizing image delivery through CDN integration and Sharp processing

Kambaz, Learning Management System — Sept 2025 – Dec 2025

- Developed full-stack LMS using Next.js (TypeScript) and Node.js/Express REST API, supporting role-based access control (RBAC) for Student, Faculty, and Admin users
- Designed RESTful API with 20+ endpoints for course enrollment, assignment grading, and user management with server-side role-based filtering
- Implemented client-side state management using Redux Toolkit and redux-persist across 10+ reducers, enabling real-time UI updates and persistent session handling
- Deployed scalable application on Vercel and Render with MongoDB Atlas, delivering full CRUD operations across 5 core LMS modules for 8+ courses

Enhancing Education through Generative AI — July 2024 – April 2025

- Developed AI-powered quiz generation system using LangChain and Google Gemini API, processing 50+ educational PDFs to auto-generate 100+ MCQs, reducing manual creation time by 80%
- Built automated flowchart generation pipeline for 20+ DSA algorithms using Pillow and Regex, achieving 95% diagram accuracy with sub-5-second rendering
