EDUCATION

Northeastern University, Khoury College of Computer Sciences

Master of Science in Computer Science

Related courses: Computer Systems, Algorithms, Web Development

Fr. Conceicao Rodrigues College of Engineering, Mumbai, India

Bachelor of Engineering in Computer Engineering

Related courses: Data Structures and Algorithms, Software Engineering, Machine Learning

Sept 2025 – Present

Expected graduation: December 2027

GPA: 3.5/4.0

July 2021 – June 2025

GPA: 9.50/10.0

TECHNICAL KNOWLEDGE

Languages: C, Python, Java, JavaScript

Databases: PostgreSQL, MongoDB, MySQL

Web Technologies: HTML, Tailwind CSS, TypeScript, ReactJS, NodeJS, REST APIs, Spring Boot, WebSocket

AI / ML: LangChain, Google Gemini API, prompt engineering, LLM pipelines, multi-agent orchestration

Cloud & DevOps: Git, Docker, RabbitMQ, CI/CD pipelines, GCP Cloud Run, Vercel, Render

AI Dev Tools: Claude Code, Cursor, GitHub Copilot, Codex

WORK EXPERIENCE

Full-Stack Developer

April 2026 – Present

Artory.ai (MIT Sloan)

Boston, MA

- Reduced AI story-generation latency by 51% (7,900ms to 3,900ms) by profiling backend bottlenecks and optimizing API calls
- Delivered an end-to-end gifting feature across TypeScript frontend and Supabase backend, unlocking a new user-to-user flow
- Engineered a secure forgot-password flow end-to-end – TypeScript UI, token handling, and Supabase Auth integration
- Built and deployed 6 GCP Cloud Scheduler cron jobs on Cloud Run to automate gift lifecycle emails, subscription expiry, and data cleanup, secured via bearer-token auth
- Used Claude Code and Cursor throughout the development workflow to accelerate iteration, debug across the stack, and automate repetitive code tasks

PROJECTS

Enhancing Education through Generative AI

July 2024 – April 2025

- Built an AI pipeline using LangChain and Google Gemini API to process 50+ PDFs and auto-generate 100+ MCQs – adopted by the Head of Computer Engineering department for coursework
- Automated flowchart generation for 20+ DSA algorithms using Pillow and Regex, achieving 95% diagram accuracy with sub-5-second rendering
- Designed a multi-step LangChain agent workflow: document ingestion, chunking, context-aware MCQ generation, and output validation – each stage independently orchestrated

Motiv8 Fitness Application

July 2025 – Dec 2025

- Architected a 6-service fitness tracking platform using Spring Boot with event-driven messaging (RabbitMQ), service discovery (Eureka), and polyglot persistence (PostgreSQL, MongoDB)
- Implemented centralized configuration (Spring Cloud Config), API Gateway routing, and structured logging for end-to-end observability across all services
- Designed asynchronous inter-service communication using WebClient with load balancing, decoupling services for independent scaling
- Containerized all services with Docker Compose, enabling single-command deployment and horizontal scaling

NexusNU, Social Networking Website

Sept 2025 – Present

- Built and deployed a full-stack MERN social platform for Northeastern students, scaling to 100+ active users with JWT auth and role-based access control
- Implemented real-time messaging and notifications using Socket.io, managing complex relational data across User, Post, and Event models with Mongoose schemas
- Integrated JSearchAPI and ESCO APIs to deliver real-time job listings with autocomplete search, driving daily engagement across the student user base
- Optimized media delivery pipeline using Sharp image processing and CDN integration, deployed on Netlify and Render with CI/CD and MongoDB Atlas

Kambaz, Learning Management System

Sept 2025 – Dec 2025

- Developed full-stack LMS using Next.js (TypeScript) and Express, supporting 3-tier RBAC for Student, Faculty, and Admin across 5 core modules and 8+ courses
- Built server-side API with 20+ endpoints for enrollment, assignment grading, and user management with role-based filtering and input validation
- Managed complex client-side state using Redux Toolkit and redux-persist across 10+ reducers, enabling real-time UI updates and persistent session handling
- Deployed on Vercel and Render with MongoDB Atlas, delivering full CRUD operations across all LMS modules with 99% uptime
